LIPOTROPIC INJECTIONS
SAFE, EFFECTIVE AND NATURAL SUPPLIMENTS FOR INCREASING METABOLISM AND STIMULATING WEIGHT LOSS.

Our lipotropic injections consist of a proprietary blend of Methionine, Inositol, Choline, amino acids and B complex vitamins. Combined these lipotropic nutrients encourage the export of fat from the liver. Lipotropics are necessary for the maintenance of a healthy liver as well as burning the exported fat for additional energy. They assist in breaking down fat in your body and aid in removing metabolic waste, toxins and cellular debris. When combined with an hCG program, these produce even better results, more energy and less toxicity.

LIPOTROPICS; a fancy word for a combination of amino acids that are essential for the health of your liver. Your liver is the organ responsible for removing fat and toxins from your body, so if it is healthier, it will work better for you.

Vitamin B12 is essential for helping to form new, healthy cells in the body. It also boosts energy, helping to increase activity levels.

Methionine is one of the sulphur-containing amino acids (along with cysteine) that is essential for many bodily functions. It acts as a lipotropic agent to prevent excess fat buildup in the liver and the body, is helpful in relieving or preventing fatigue and may be useful in some cases of allergy because it reduces histamine release. Patients with a sulfa allergy should not take this injection.

Inositol is a nutrient belonging to the B vitamin complex, is closely associated with choline. It aids in the metabolism of fats and helps reduce blood cholesterol. Inositol participates in the action of serotonin, a neurotransmitter known to control mood and appetite.

Choline supports the health of the liver in its processing and excretion of chemical waste products within the body. Moreover, it is required for the transport and metabolism of fats and cholesterol within the body, which is important for the healthy support of the endocrine, cardiovascular and hepatic systems.

Lipotropic injections are typically injected 1-2 times per week.

These injections are set up to be used in conjunction with a diet and exercise program. As with anything with weight loss, the only way to keep the weight off long term is with a change in lifestyle. **NOTE: If you have 30 lbs. or more to lose, the Lipotropics are injected into a fatty area one to two times a week for maximum results.**
